PROSTHETIC & ORTHOTIC ASSOCIATES

Middletown, NY ■ Kingston, NY ■ Poughkeepsie, NY ■ Mahwah, NJ

"Jon and POA have been wonderful—I can't say enough good things."

—Gloria, below-knee prosthetics patient

Friendly, Knowledgeable Clinicians

- The clinical and fabrication teams at Prosthetic & Orthotic Associates (POA) consist of some of the most well-trained and experienced clinicians and technicians in the orthotics and prosthetics (O&P) profession. Patients from around the world travel to our facilities to take advantage of our team members' knowledge and skills.

Our specialties include:

- Computer-Aided Design (CAD)/ Computer-Aided Manufacturing (CAM)
- Microprocessor Prosthetic Knees
- Functional Electrical Stimulation (FES) Systems
- MyoPro Myoelectric Upper-Limb Orthosis
- Orthotronic Mobility System

Measuring Patient Outcomes Is Key

- As a leader in the O&P profession, we have integrated the use of patient outcome measurement tools into our patient care process. POA utilizes a variety of validated measurement tools specific to each patient's needs. Using this approach, POA analyzes each patient's performance over time, and then compares it to outcomes data from a similar nationwide patient population that is receiving similar O&P care.

Commitment to Successful Patient Results

- Everyone is different. Each patient comes to POA with unique physical attributes, needs, and goals. A prosthesis or brace that works for one patient may not work for another. The POA clinical team approaches each person as an individual. Every effort is made to meet our patients' needs and help them achieve their goals.

History

- POA was formed in 1989 by Tom Passero, CP. At that time, Tom was the senior staff prosthetist at the Helen Hayes Hospital Center for Rehabilitation Technology, West Haverstraw, New York, but he felt a growing desire to engage patients in a more intimate, private-practice setting. Since its beginnings on Ballard Road, POA has been anchored in Middletown, New York; its main patient care facility is now located among the growing medical office developments on Riverside Drive.

Technology

- At POA, our team is focused on optimizing technological advances in components and materials and applying them to the clinical techniques for fitting devices. We are at the forefront of using telemedicine, which provides access to clinical experts nationwide, and use electronic medical records throughout the entire practice.

Community

- The POA team is involved with a variety of charitable organizations. As we believe in giving back to the communities that we are privileged to serve, we regularly volunteer our time and contribute to local organizations and events.

Handspring

- Over the last decade, POA's clinical team has invested a great deal of time and effort in expanding its global expertise in the latest upper-limb prosthetic innovations. Upper-limb prosthetic care and technology requires a specialized skillset and an ongoing desire to keep up with this rapidly changing niche in the O&P profession. For this unique area of patient care, POA expanded its service offerings in 2012 by introducing a new division: Handspring.

Providing holistic, specialized care in upper-limb prosthetic rehabilitation.

Handspring
